

PRIVYVIEW

Textured glass for unique interiors

Create unique interiors with PRIVYVIEW, a cosmetically textured glass. These panels allow architects and interior designers to create eye-catching textured glass. The textures and patterns obscure visibility to meet your privacy requirements. The unique texture helps reduce glare without lowering the light flow, ensuring you enjoy bright and energy-efficient interiors. Along with enhanced aesthetics, we can process these units as laminated or double-glazed panels, offering safety, security, and thermal and sound insulation.

Key Features

Enhanced Privacy

These textured panels obscure visibility to provide privacy as per your requirements.

Multiple Design Options

PRIVYVIEW comes in a range of fluted and reeded patterns, providing architects and interior designers with unlimited design opportunities.

Reduced Glare

Although these panels do not impact light transmission, they minimise glare, allowing you to view computer screens from every angle without making adjustments.

Technical Specifications

Feature	Description
